[CodeWeavers](#) has released a maintenance update for [CrossOver](#) and [CrossOver Games](#), the change logs with some of the many changes made in the releases are provided below.

Change Log For CrossOver Games

10.1.2 CrossOver Games

- Added a workaround for a bug in OS X 10.7 Lion. Many games running in a virtual desktop cause a crash. This can be resolved by setting the `CX_LEAK_XPLUGIN_SURFACES` environment variable.
- Work around a bug in OS X 10.6.8 Snow Leopard. 10.6.8 generated corrupt icon files which caused occasional Finder crashes. Now we use a different API to generate icon files which bypasses the issue.
- Changed behavior of group permissions on certain files. Resolves an issue with .docx files on certain file systems.

Change Log For CrossOver

10.1.1 CrossOver

- Added a workaround for a bug in OS X 10.7 Lion. Many games running in a virtual desktop cause a crash. This can be resolved by setting the `CX_LEAK_XPLUGIN_SURFACES` environment variable.
- Work around a bug in OS X 10.6.8 Snow Leopard. 10.6.8 generated corrupt icon files which caused occasional Finder crashes. Now we use a different API to generate icon files which bypasses the issue.
- Changed behavior of group permissions on certain files. Resolves an issue with .docx files on certain file systems.
